

1.5- Solution sets of linear systems

Homogeneous Linear Systems

ett linjärt ekvationssystem sägs vara homogent om det kan skrivas som $Ax = 0$

A , $m \times n$ matris

0 , nollvektor i \mathbb{R}^m

En sådant system har minst en lösning $x = 0$.

(nollvektor i \mathbb{R}^n). Kallas trivial solution.

The homogeneous equation $Ax = 0$ has a nontrivial solution if and only if the equation has at least one free variable
